

ABSTRACT OF THE DISCLOSURE

The present invention is a method and apparatus for the dynamic and customizable display of information pertaining to a work-flow management and document generation system. More particularly the invention utilizes a data driven interface, where at least one table within a database associated with the system is used to generate the customizable interface and dynamic display of information therein. The interface is preferably a browser-based interface where the code for creation of the interface is generated, at least partially, as a function of the information stored within the table. Such a system may be employed, for example, for the display of information relating to the automated processing of a transaction, including a real estate closing process.
